Sean Jones

Full-Stack Engineer & Technical Lead | TypeScript, Angular, Python, AWS | LLM Features | Browser Extensions
Arvada, CO (Denver metro) | hello@seanjones.io | (303) 960-4471 | seanjones.io | linkedin.com/in/sean-jones-301439b0

SUMMARY

Full-stack engineer with 15+ years of experience, nearly 10 at Price.com, a shopping platform with 590,000 monthly active users, building its web app and cross-browser extensions in TypeScript, Angular, and Python on AWS. Built the frontend for ai.price.com, a Gemini-powered shopping assistant that lifted recommendation click-through 15%, and ships extensions to Chrome, Firefox, Edge, and Safari for 10,000+ users. Outside work, builds products in React, Next.js, FastAPI, and Supabase, including a RAG application on Claude.

SKILLS

Languages: TypeScript, JavaScript, Python, C#, PHP, SQL
Frontend: Angular, React, Next.js, Vue.js, Stimulus, Astro, Vite, Webpack, Lightning CSS
Backend: FastAPI, Django, Laravel, ASP.NET, .NET Core
AI: LLM integration (Gemini, Claude), retrieval-augmented generation (RAG), real-time LLM output over WebSockets, prompt engineering, AI-assisted development (Claude Code)
Cloud and Delivery: AWS (EC2, S3, CloudFront), GitHub Actions, Docker, Vercel
Testing: pytest, Vitest, stylelint
Databases: PostgreSQL (Supabase), SQL Server, MySQL
Browser Extensions: Chrome, Firefox, Safari, Edge; store releases and versioning

EXPERIENCE

Price.com **Remote**

Director of Engineering Nov 2022 to Present

Sole technical lead for a shopping platform with 590,000 monthly active users and browser extensions with 10,000+ users; own architecture, platform strategy, and engineering operations, and write code throughout.

- Built the frontend for ai.price.com, a Gemini-powered shopping assistant for pricing, cash-back, and coupons. Streamed model responses over WebSockets so answers appear as they are generated, and designed the state management around them; click-through on AI-driven recommendations rose 15% after launch.
- Implemented the price.com redesign end to end from the design files: about 90 server-rendered Cotton components in Django and about 70 strict TypeScript Stimulus controllers that download only when a page uses them, with no jQuery.
- Rebuilt the Django side as thin views, a services layer, and presenter functions backed by about 1,540 pytest tests. Views fetch upstream data in parallel, every external call has timeouts and caching tuned to how fast its data changes, and a failed API call degrades one section instead of the whole page.
- Quadrupled the site's Lighthouse performance score (measured on PageSpeed Insights to rule out local browser effects) and cut sitewide load times 20% by server-rendering above-the-fold content, inlining critical CSS, deferring non-critical JavaScript and CSS, and replacing large legacy stylesheets and scripts with modular ones.
- Replaced manual deploys (SSH into EC2, git pull, collectstatic) with CI/CD on GitHub Actions and Docker that builds assets once, ships content-hashed files to S3 behind CloudFront, and fails the build on pytest, Vitest, TypeScript, or stylelint errors; deployment time fell 25%.

Lead Software Engineer Nov 2016 to Nov 2022

- Rewrote the company's browser extensions from static, unstructured JavaScript, CSS, and HTML into a component-based Angular and TypeScript app, effectively a full web app running inside the extension, and ran releases and versioning across the Chrome, Firefox, Edge, and Safari stores.
- Set the technical roadmap with product and executive leadership, turning business priorities into architecture decisions and delivery milestones.

Marlinco and The Alchemedia Project (now part of Marlin Connections) **Springfield, MO**

Senior Web Developer Aug 2012 to Nov 2016

Marlinco, Aug 2012 to Feb 2015; The Alchemedia Project, Feb 2015 to Nov 2016.

- Built and launched a B2B e-commerce platform for Starbucks Branded Solutions from the ground up, used by businesses across the US to order custom coffee and products.
- Created a self-service Angular and C# tool that generates branded PDF sales materials for Procter & Gamble's national sales team, cutting a multi-hour manual process to minutes.
- Developed enterprise web applications for global clients on Microsoft and LAMP stacks (C#, PHP, Python/Django, SQL Server, IIS, Apache), contributing to a 22% increase in client revenue.
- Automated deployment workflows and reached a 99% successful deployment rate.

EARLIER EXPERIENCE

- IT Programmer, Springfield ReManufacturing Corp. (part of SRC Holdings), Springfield, MO | Aug 2011 to Aug 2012: built internal tools in PHP, MySQL, and JavaScript on IIS, adopted across departments and raising operational efficiency 20%.
- Web Developer Intern, The Alchemedia Project (now part of Marlin Connections), Springfield, MO | Nov 2010 to Aug 2011: built MVC web applications in C#, SQL Server, and JavaScript across five concurrent client projects.

PROJECTS

RAG Application on Claude **Personal project**

- Built a retrieval-augmented generation (RAG) application on Claude that answers questions over a product catalog or uploaded documents.

TaskRiver (taskriver.ai) **Personal project, live**

- Built a workflow automation product for small businesses that responds to missed calls and new leads, with AI handling routine replies inside owner-approved rules. React, Vite, FastAPI.

VetSalary (vetsalary.org) **Personal project, live**

- Built a salary transparency site for veterinary medicine that collects anonymous, community-sourced pay data and normalizes it to a 40-hour week. Next.js on Vercel with Supabase.

Also built: whatcontractorspay.com (Next.js, TypeScript), recipesfortheweek.com (Next.js, TypeScript), thefamilyshortlist.com (Astro, JavaScript, Python), fsmaradar.com (static HTML on Vercel), seanjones.io (Vue.js).

EDUCATION

Missouri State University **Springfield, MO**

B.S., Computer Information Systems
